### OBJECTIVE

Aspiring junior software developer with strength in frontend  
Creative problem-solver and strong self-learner. Motivated and eager  
to learn and use new and existing skill sets in the next workplace.

### WEB&APP PROJECTS

#### Project1-KameHame Fighters

A simple web-game created with HTML&CSS. Players can shoot a laser beam to their opponent. Higher power laser will eliminate the weaker one. Each Player will have three lives and a short period of invincibility after each deaths.

#### Project2-Instagram Clone

A project based on Instagram layouts and features. Users can create their posts with captions. Like button will appear on logged-in users' device. Photos are stored on AWS (Amazon S3). Express, node.js, PostgreSQL are used in this project.

#### Project3-Customized Website Agency

After registering, users can pick their ideal plans and contact the customer service via an insta chat system(Tidio). Orders are saved in PostgreSQL. React, Redux and libraries(Bootstrap)are used for frontend development. Express, Node.js and PostgreSQL are used for the backend development.

#### Project4- Youtube Viewers Boosting App

This mobile application targets the small youtubers community . After logging in with their Google accounts. The application automatically fetches all their videos data from Youtube API. Users can pick their own favorite video and repost it on this App. In addition, each users are assigned their own chatroom to share ideas and talk to their supporters.

React Native and a few libraries are used for the front-end.

Firebase(No SQL) database, Google Oauth are used for the back-end.
